# 1. INTRODUCTION

File layout IBIXML, import bankruptcy information, is used to import the bankruptcy details into all ARC's modules. The import file is an XML-file that must follow a specific scheme.

XML-scheme can be found at <http://schema.aptic.net/aptic-link-import-bankruptcy.xsd>.

In the scheme, all fields that are available can be interpreted; we can determine the order of these and even point out which ones are required to be filled in. Many fields are optional and some of those fields might be replaced with default values if empty.

# 2. EXAMPLE

The example file below shows the file with three bankruptcy info details. Two of them, having types 1 and 2, will be inserted / updated. The bankruptcy with type 3 will be deleted from the ARC system.
