1. INTRODUCTION

File layout IDVXML, import disbursement verification, is used to import information about verification of disbursements into all ARC's modules. The import file is an XML-file that must follow a specific scheme.

XML-scheme can be found at <http://schema.aptic.net/aptic-link-import-disbursementverification.xsd>.

In the scheme, all fields that are available can be interpreted; we can determine the order of these and even point out which ones are required to be filled in. Many fields are optional and some of those fields might be replaced with default values if empty.

2. EXAMPLE

The example below shows an XML file having disbursement verification information. First item having reference REF66644 is declined and second item with reference REF16706 is verified.

```
<?xml version="1.0" encoding="utf-8"?>
<disbursementverifications xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:noNamespaceSchemaLocation="http://schema.aptic.net/aptic-link-import-
disbursementverification.xsd">
  <disbursementverification>
    <intransitreference>REF66644</intransitreference>
    <status>declined</status>
    <notesfrombank>Notes from bank regarding reference REF66644</notesfrombank>
  </disbursementverification>
  <disbursementverification>
    <intransitreference>REF16706</intransitreference>
    <status>verified</status>
    <notesfrombank>Notes from bank regarding reference REF16706</notesfrombank>
  </disbursementverification>
</disbursementverifications>
```

3. ELEMENT DESCRIPTIONS

Below you can find a short element description of the elements that are available.

Element	Type	Required	Description
disbursementverifications / disbursementverification			
@intransitreference	String(60)	Required	Reference of the disbursement verification.
@status	String(10)	Required	Status of disbursement verification data. This field might contain one out of two options: <ul style="list-style-type: none"> - "declined"; - "verified".
@notesfrombank	String(4000)	Optional	Notes from the bank related to the disbursement.
