# 1. INTRODUCTION

File layout IDXML, import debt relief information, is used to import the debt relief details into all ARC's modules. The import file is an XML-file that must follow a specific scheme.

XML-scheme can be found at <http://schema.aptic.net/aptic-link-import-debtrelief.xsd>.

In the scheme, all fields that are available can be interpreted; we can determine the order of these and even point out which ones are required to be filled in. Many fields are optional and some of those fields might be replaced with default values if empty.

# 2. EXAMPLE

The example file below shows the file with three debt relief details that will be updated.
